

Project 4 – Data Visualization

Objective

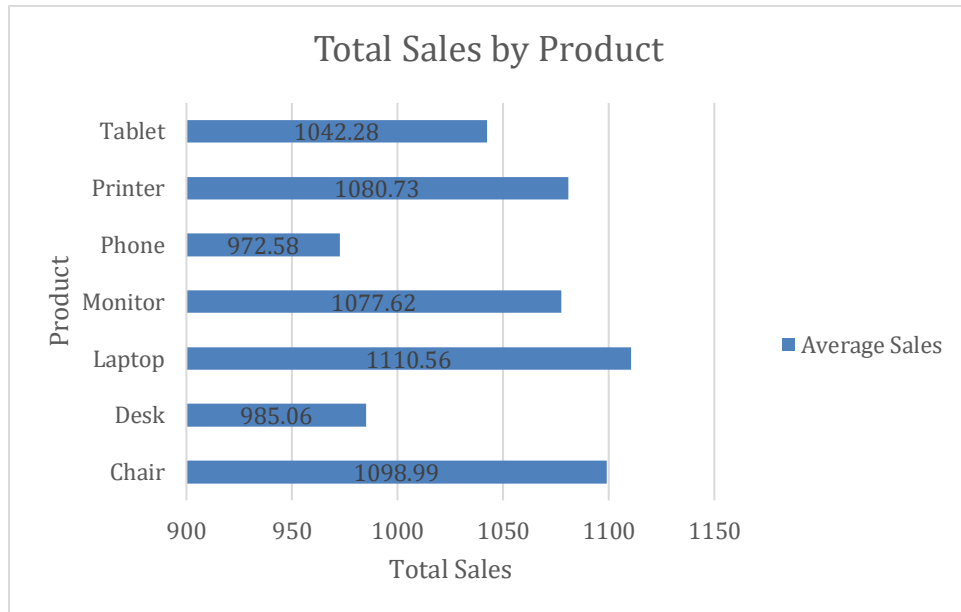

The objective of this project is to visualize sales data using charts and identify meaningful business insights.

Chart 1 – Total Orders by Product

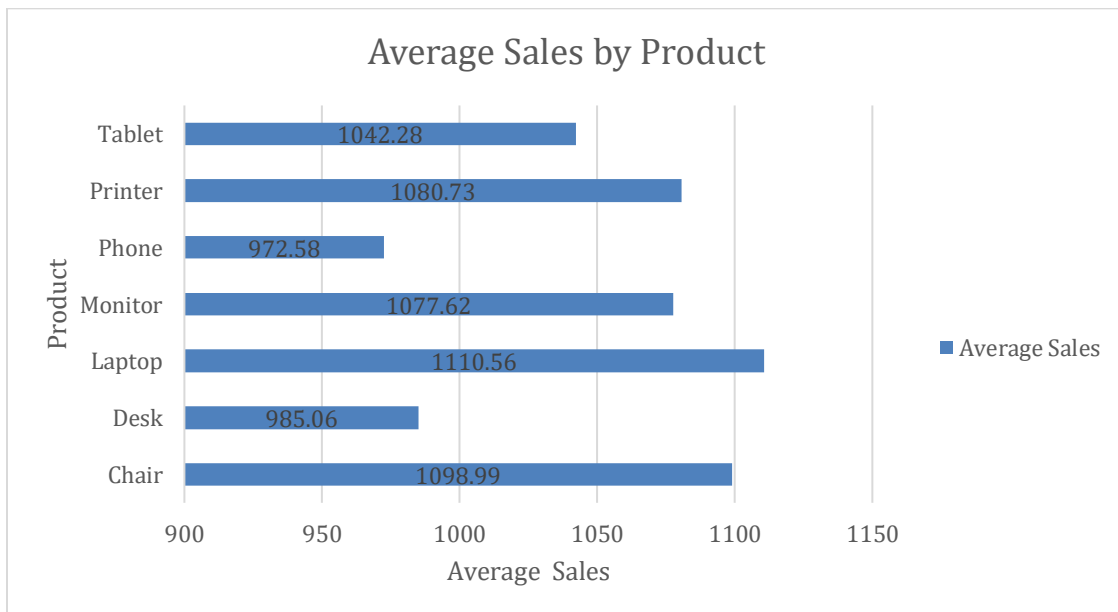

Insight: Printer received the highest number of orders (181), while Phone received the lowest number of orders (156).

Chart 2 – Total Sales by Product

Insight: Printer generated the highest total sales (195,612.61), while Phone generated the lowest total sales (151,722.39).

Chart 3 – Average Sales by Product

Insight: Laptop had the highest average sales value (1110.56), while Phone had the lowest average sales value (972.58).

Conclusion

Data visualization helped analyze product performance and sales trends. Charts made it easier to compare products and identify the highest-performing and lowest-performing categories.
